

Neurology Research Areas of Interest

Neuromyelitis Optica Spectrum Disorder (NMOSD)

- Real-world effectiveness and safety of ravulizumab and eculizumab across NMOSD treatment algorithm
- Mitigation and management of meningococcal infection in patients treated with ravulizumab and eculizumab and prior to treatment

Out of Scope

- Clinical comparative studies with other disease modifying treatments

Generalised Myasthenia Gravis (gMG)

- Effectiveness and safety of earlier treatment with ravulizumab in gMG in patient groups of interest
- Reduction of concomitant steroid use during ravulizumab treatment
- Effectiveness and safety of switching from eculizumab or other novel gMG therapies to ravulizumab
- Use of ravulizumab in all gMG settings including crisis, exacerbations, hospitalisations
- Assessing gMG disease status, with novel clinical, patient-centric or composite outcomes
- Clinical consequences of complement-mediated destruction and inflammation at the neuromuscular junction
- Digital and/or physiologic biomarkers to identify gMG patients who may benefit the most from ravulizumab treatment

Out of Scope

- Clinical comparative studies with other disease modifying treatments
